Backbase Certified Back-End Engineer for the 5.6 Platform

Vincent Stoessel

Senior Software Engineer @ Backbase | Spring Boot & Cloud | AI-Augmented Engineering | Microsoft Alum

Atlanta, Georgia, United States

Summary

Software engineering is not just my profession; it's my passion. I am a dedicated and solutions-oriented Senior Software Engineer with 14 years of experience in software design, project management, and cloud-native architectures. Adept in framework tools, DevOps practices, and continuous integration, I ensure streamlined development processes and deliver robust, reliable solutions. As a proactive leader and creative problem-solver, I foster collaborative environments that drive successful project outcomes.

Experience

Backbase

Senior Software Engineer (Fintech)

March 2025 - Present (11 months)

Atlanta, Georgia, United States

Development of Digital Banking Solutions: I am part of a team aiming to create the best digital banking solution on the planet, enabling our clients to deliver superior online and mobile customer experiences.

Microsoft

3 years 7 months

Senior Software Engineer (Security)

July 2021 - January 2025 (3 years 7 months)

Atlanta, Georgia, United States

Enhanced MDTI's Microsoft Graph endpoints by implementing new features and resolving technical issues. Authored and updated Microsoft Graph API documentation, contributing to the open-source GitHub repository.

Developed and maintained features, addressed bugs, conducted pull request reviews, and deployed updates for the Microsoft Defender for Threat Intelligence (MDTI) application as a full-stack developer.

Utilized Java and Spring Boot for backend development and React for frontend UI implementation.

Performed on-call responsibilities, including monitoring and responding to incidents via the Incident Response system. Have created and presented Post Incident Reviews (PIR) for the leadership team (LT).

Ensured GDPR compliance by maintaining data classification standards for data privacy.

Senior Site Reliability Engineer (Security)

July 2021 - July 2023 (2 years 1 month)

Atlanta, Georgia, United States

Led a cross-organizational project to integrate a multi-level detection authoring framework and hosting service with a security information and event management (SIEM) into the Azure China Sovereign Cloud.

Engineered real-time AI/ML inference capabilities by collaborating with data scientists to develop an Azure Function that streamed live data into an AzureML model. Optimized Kusto Query Language (KQL) queries and provisioned essential infrastructure, ensuring synchronized data delivery for accurate, live predictions

Collaborated with air-gapped Government Cloud engineering teams to ensure feature parity with public consumer clouds and compliance with regulatory standards.

Developed and Tested new deployment pipelines and Azure Resource Management (ARM) templates for critical security information and event management (SIEM) services.

Atlanta Java Users Group

Board Member, DevNexus chair

May 2010 - October 2022 (12 years 6 months)

Greater Atlanta Area

Board member of the Java Users Group and co-organizer for the annual DevNexus, the largest Java conference in the US. Helps organize the free monthly Java based meetup group.

Backbase

Senior Software Engineer

March 2017 - July 2021 (4 years 5 months)

Atlanta, Georgia, United States

Worked within Backbase to help build and support modern banking solutions for Financial Institutions from around the globe. We helped them modernize so they could face the disruption from challenger banks and fintechs. My stack included Java, Spring Microservices, Docker, Spring Cloud and other Cloud Native tools that were deployed to both AWS and Azure

Manheim

Senior Messaging Engineer

September 2016 - March 2017 (7 months)

Greater Atlanta Area

Developed, Supported, Tested and Deployed ActiveMQ Clustered Messaging Systems.

Used Java to help develop enhanced capabilities into the existing ActiveMQ cluster.

Leveraged the Apache Camel Java DSL to increase application flexibility.

Provided Level 3 on-call support for the existing ActiveMQ cluster. Learned and built custom RPMs with spec files and rpmbuild.

Deploy message brokers to VM based test environments via Puppet. Built monitoring dashboards using Splunk Cloud. Monitored and did troubleshooting of upstream messaging issues with various internal teams.

Backbase

Java Integration Engineer

October 2014 - September 2016 (2 years)

Atlanta

My primary role was to integrate the core Backbase platform with internal and external services in order to support our clients. I've implemented solutions using Docker, Apache Camel, Apache CXF (SOAP), ActiveMQ, Velocity, Jackson, Spring, OSGi and the list goes on. I work closely with the team in Amsterdam as well as the Frontend developers here in the US. Occasional travel throughout the US and Europe.

Forbes Travel Guide

Architect, Senior Developer

January 2013 - October 2014 (1 year 10 months)

Atlanta, Ga

Forbes Travel Guide was a spinoff company from Sharecare/Arnold Media LLC.

As a member of the Forbes Travel Guide team, I joined the new venture with most of my original team.

Responsible for designing and coding the overarching features for our core framework.

Got up to speed quickly with MongoDB as we transitioned away from Riak.

Investigated new technologies and frameworks for future usage.

Helped lay the foundation for porting a poorly designed, legacy

ColdFusion B2B application to a modern Grails based solution.

(Forbeshospitalitysolutions.com)

Ran a bi-weekly “code meetup” with developers to discuss best practices and the current state of the codebase.

Maintained code for Magnolia CMS, including making a change in the datastore implementation that was instrumental in saving the company 72,000USD annually.

Sharecare, Inc

Engineering Team Lead (Health Care)

May 2011 - January 2013 (1 year 9 months)

Atlanta, Georgia, United States

One of the first engineers hired for the new startup venture. Helped to build and mentor a new development team coming from various backgrounds. I was a coding team lead, developing software as I attempted to lead by example.

Learned and implemented Scrum as our Agile methodology.

Got up to speed quickly with the Riak NoSQL datastore. Worked

on the software platform that powered both Sharecare.com and

Forbestravelguide.com. Was assigned the role of leading the Forbes Travel Guide development team.

We brought the Forbes Travel Guide’s luxury travel site up and running with a hard deadline of 6 months from inception.

Leveraged the java skills of the team to build a robust Spring MVC and Magnolia CMS based development platform that was reusable across two of the company's marquee sites. Sharecare.com and Forbestravelguide.com

Education

University of Maryland Baltimore County

BA, Economics
